```scala
object BubbleSort {
  def bubbleSort(arr: Array[Int]): Array[Int] = {
    val n = arr.length

    for (i <- 0 until n-1) {
      for (j <- 0 until n-i-1) {
        // Swap if elements are in wrong order
        if (arr(j) > arr(j + 1)) {
          val temp = arr(j)
          arr(j) = arr(j + 1)
          arr(j + 1) = temp
        }
      }
    }
    arr
  }

  def main(args: Array[String]): Unit = {
    val array = Array(64, 34, 25, 12, 22, 11, 90)

    println("Original Array: " + array.mkString(", "))

    val sortedArray = bubbleSort(array)

    println("Sorted Array: " + sortedArray.mkString(", "))
  }
}
```

Output

```
Original Array: 64, 34, 25, 12, 22, 11, 90
Sorted Array: 11, 12, 22, 25, 34, 64, 90
